

Grade 4 3D shape activity

On Wednesday, 15th October, Grade 4 students participated in a hands-on activity about 3D shapes. Before carrying out this activity, students had the opportunity to investigate the different properties of various 3D shapes. A Maths learning centre was also set up in class, where different 3D objects, which we find in everyday life, were put on display. Their different properties were discussed. Then, in their respective groups, students were given straws and play dough. Each group was assigned a 3D shape. In groups, students created their own 3D shape using play dough and straws. Finally, each group presented its own 3D shape outlining its different properties. This was a very interesting activity!

Grade 4 3D shape activity

October 20th - 24th 2014
